

# MagicEzy

## HAIRLINE

# FIX

### HOW TO APPLY

#### STEP 1 : PREPARE

- Do not use below 10°C / 50°F
- Suitable for above the waterline use.
- Scrape a pin point along crack to remove grime and dirt.
- Wash/scrub soapy water into damage, then rinse with clean water. Allow to fully dry in sun or accelerate dry with a hairdryer.
- Rotate/shake the tube for 30 seconds for even consistency.

#### STEP 2 : APPLY

- For plastic or aluminum surfaces, apply a thin coat of MagicEzy MegaFusion Primer/Sealant and allow 2 hours to cure (at 70°F/20° C).
- APPLY 2 Drops into the crack, whilst holding a tissue in your spare hand.

#### REPAIR SECRETS

##### Color match ?

*Mix two or more colors on a clear plastic wrap. View new color when placed over the surface.*

##### How do I apply on vertical surfaces ?

*To prevent slump or for a FAST dry time, use a hairdryer for 3 minutes to form a skin.*

### STEP 3 : LEVEL

- Rapidly wipe the 'LEVEL' across the repair 5 times. FAST wipes help Hairline Fix penetrate deeply inside the damage.
- Clean the 'LEVEL' with the tissue and TRIM off surface smears.
- Some deep cracks may require several coats to fill completely. Allow at least 2 hours in between coats before re-applying (overnight is best).

How do I apply in hot / cold weather?

*In temperatures above 90°F (30°C) lay a damp towel over the area until hand temperature is reached. Below 60°F /15°C, set with hairdryer for 3 minutes.*

### STEP 4 : TRIM

- TRIM to remove smears off the repair edge (but not the repair itself). Dampen or use a tissue to help clean-up if necessary.

### NOTES :

- DRYING time varies depending on temperature. FAST DRY using a hot hair dryer for 3 minutes + 30minutes cool down. NORMAL DRY: 2 hours (at 70°F/20° C). It will harden overnight and achieve maximum strength and adhesion after 14 days.
